

Default + Belady

Default + ILP-Greedy

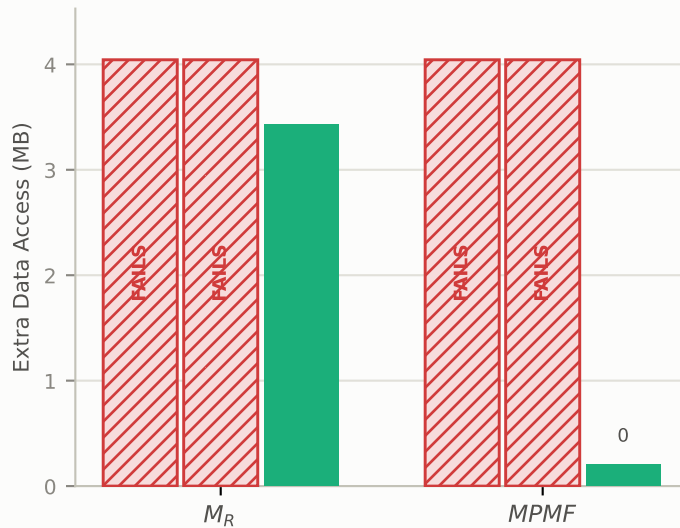

COSMA (native ILP)

Baseline FAILS outright (allocator fragmentation)

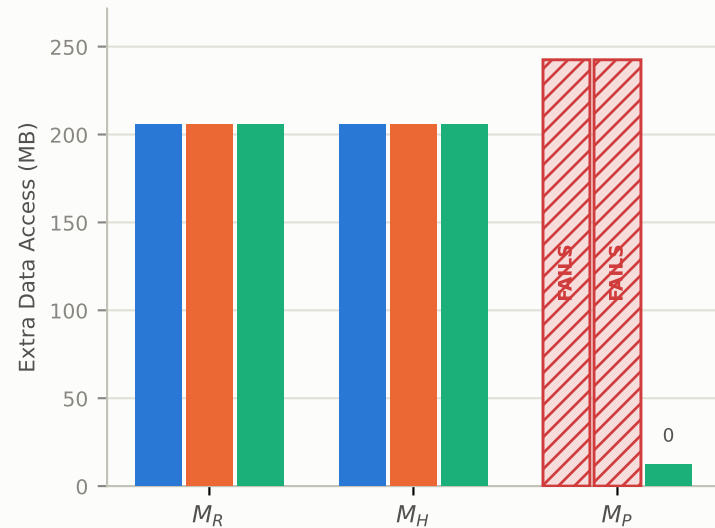

DenseNet-121 (INT8)

ResNeXt-50 (FP32)

R2Plus1D-18 (FP32)

Every tested model with a real (non-degenerate) M_R -to- M_{PMF} budget range: the TFLite-style baseline allocator fails to place tensors at all at the tight budgets; COSMA's joint ILP succeeds, reaching the guaranteed 0 bytes at M_{PMF} every time -- the paper's own headline comparison (Sec. V-B.2).
